# **Inflation Expectations**

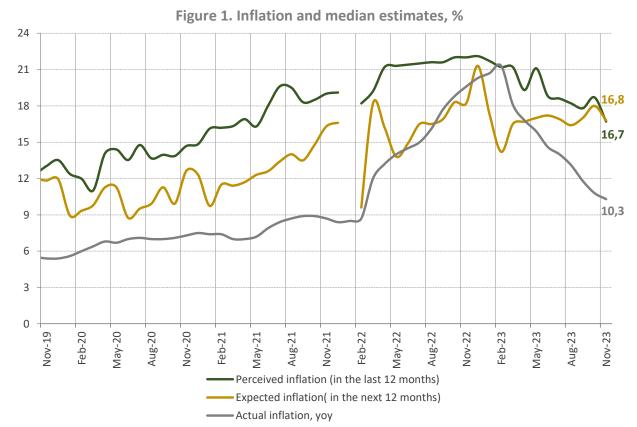

## November 2023

- Inflation expectations of the population decreased slightly in November this year, but they still remain high
- Consumer sentiment has worsened due to lower estimates of personal financial situation over the past year, the country's development prospects in the coming year, and readiness for large purchases

### **Inflation expectations**

The median estimate<sup>1</sup> of expected inflation in the next 12 months decreased to 16.8% in November 2023, perceived inflation over the past 12 months decreased to 16.7% (Figure 1).

According to the survey results, the share of respondents, expecting a faster increase in the prices on the one-year horizon, decreased to 27% in November 2023 (October 2023 – 32%).

country in the next 5 years

1 A quantitative assessment of inflation expectations/median estimates for January 2022 has not been published, because the results of the survey in January 2022 were influenced by January events in the country, which affected the smaller sample size and incompatibility with previous data

Median estimate of perceived inflation based on the survey results: How much exactly do you think the prices of goods and services have increased over the past 12 months? Median estimate of expected inflation based on the question: How much exactly do you think prices for goods and services will rise in the next 12 months?

- <sup>2</sup> Consumer sentiment index The average value of private indices:
  - changes in personal financial situation over the past year;
  - changes in personal financial situation in the coming year;
  - prospects for the development of the country in the coming year;
  - prospects for the development of the country in the next 5 years;
  - large purchases.

Current status index - The average value of private indices:

- changes in personal financial situation over the past year;
- the index of large purchases.

Consumer expectations index - The average value of private indices:

- changes in personal financial situation in the coming year;
- prospects for the development of the country in the coming year;
- prospects for the development of the country in the next 5 years.

The numerical value represents the balance of responses, which is calculated as the difference between the proportion of positive and negative responses + 100. Index values can vary from 0 to 200. A value above 100 indicates the predominance of positive estimates, below 100 – negative estimates.
